PROFESSIONAL PROFILE

Backend-focused Information Technology student specializing in API design, middleware, and server-side architecture, with a foundation in cybersecurity. Experienced in architecting RESTful backends with front-controller routing and PDO-based data access layers, designing normalized schemas with secure CRUD operations, and building the middleware that connects mobile, IoT, and web clients to backend services. Consistent Dean's Lister with strong interests in system design and architecture, cybersecurity analysis, and project leadership.

EDUCATION

Mapúa Malayan Colleges Laguna — Cabuyao, Laguna 2022 – Present
Bachelor of Science in Information Technology, Cybersecurity Specialization
Consistent Dean's Lister

Santa Rosa Science and Technology High School — Santa Rosa, Laguna 2016 – 2022
Science, Technology, Engineering, and Mathematics (STEM) Strand — With High Honors

EXPERIENCE

CREOTEC — Work Immersion, IT Documentation Lead

- Developed Android-based applications backed by server-side services to support business operations, including tools for automation of payroll processes, internal monitoring, and departmental workflows.

Web-based Wi-Fi Security Assessment Tool Using Raspberry Pi — Capstone Project

Technical Lead / Full Stack Developer

- Led the development of a cybersecurity platform, coordinating team efforts and overseeing the system from concept to deployment.
- Built and connected a data pipeline from a Raspberry Pi-based probe to a web application, integrating backend services and database components to enable data processing and access.

Faculty Recitation Management Mobile Application — Group Project

Backend / API Developer

- Developed a mobile application for faculty to streamline onsite recitations through section and student management, question organization, and basic score recording within a limited-use academic environment.
- Architected a RESTful backend with a front-controller routing system and PDO-based data access layer, supporting a normalized database with secure CRUD operations and paginated data retrieval.

TECHNICAL SKILLS & INTERESTS

Backend & APIs: PHP, C#, ASP.NET, Express.js, Python, RESTful API design, front-controller routing, PDO data access layers, secure CRUD operations, paginated data retrieval

Databases: MySQL, Supabase, normalized schema design

Server & Middleware Environments: XAMPP, Railway, Raspberry Pi, Arduino / Wemos D1 device-to-server integration

Other Languages: JavaScript, Kotlin, C++, Assembly, HTML, CSS, React.js

Tools & Development Environment: GitHub, Visual Studio Code, Android Studio, Android SDK, Figma

Networking & Security: Cisco Packet Tracer, Kali Linux, Kismet, Tailscale, Windows Active Directory

Interests: Backend and system architecture, API design, cybersecurity analysis, project leadership and coordination

FEATURED PROJECTS

R-EaseCite Mobile App

July 2025

Backend Developer | PHP, MySQL, XAMPP, Kotlin, Android Studio Jetpack Compose

- Built the PHP/MySQL backend powering a faculty recitation management application, handling section and student management, question organization, and score recording.
- Developed the server-side API endpoints consumed by the Android client, returning structured responses for section, student, question, and score operations.
- Designed the relational schema and data access logic backing the recitation workflow, including secure CRUD operations across related entities.
- Implemented client-side integration against the API, wiring request handling, filtering, and randomization logic to backend data.

Doorbell Notification System

November 2025

Backend and Device Logic Developer | PHP, MySQL, XAMPP, Wemos D1, Arduino, PIR Sensor, Sound Sensor, Kotlin

- Developed the middleware layer for an IoT doorbell system, receiving motion and sound event data transmitted from a Wemos D1 over HTTP and persisting it to a MySQL event store.
- Developed the Arduino and Wemos firmware logic to capture PIR and sound sensor input and transmit event payloads to the backend.

CCIS Department Event Enlistment Mobile App

July 2024

Developer | ASP.NET, C#, JavaScript, CSS

- Developed an application for the CCIS Department to track student participation in departmental events, including attendance records, event counts, and the specific events each student joined.
- Integrated the client with back-end functionality to support core features, wiring data-bound views to server-side event and attendance operations.
- Led the group by coordinating tasks and development progress, delivering a working system that received positive faculty feedback.

Careby Web Application

March 2024

Developer | ASP.NET, C#, JavaScript, CSS

- Built a web application for scheduling and conducting online mental health therapy sessions.
- Integrated application components with back-end functionality to support scheduling and session management features.
- Led the group by coordinating tasks and development progress.

Bagsik ng Malayan: The Game

January 2022

Backend Developer | C#

- Developed a terminal-based game in C# using object-oriented programming.
- Designed the game's core logic and mechanics, applying object-oriented programming to structure gameplay systems and organize reusable game objects.

PROFESSIONAL AFFILIATIONS

- Cybersecurity Society of the Philippines, Inc.

CERTIFICATIONS / TRAINING

- Google Cloud Computing Foundations — Google (2026)
- CompTIA Tech Plus — CompTIA (2025)
- Ethical Hacker — Cisco (2025)
- CCNA: Introduction to Networks — Cisco (2025)
- CCNA: Switching, Routing, and Wireless Essentials — Cisco (2025)
- TOEIC — Score: 920 — ETS (2025)
